

3.1.1. GEOPHYSICAL DATABASE

Geophysical databases previously created within the INSTEC project has been complemented with the results of the research performed during the third stage, basically containing:

- raw data, as acquired during the field observations on the gravity and geomagnetic field;
- secondary information, as obtained by advanced processing of the raw data.

The stored data is provided in a GIS compatible format in order to be easier associated with previously gathered geophysical and/or other kind of information.
